

Good Stuff Awards

Brian Coman (Health, Safety & Wellbeing Subcommittee)

**Share the
Good Stuff**

Thanks to the following businesses for sharing the “good stuff” they are doing to strive for excellence

High-quality Prestarts: S.T.C.K.Y Conversations

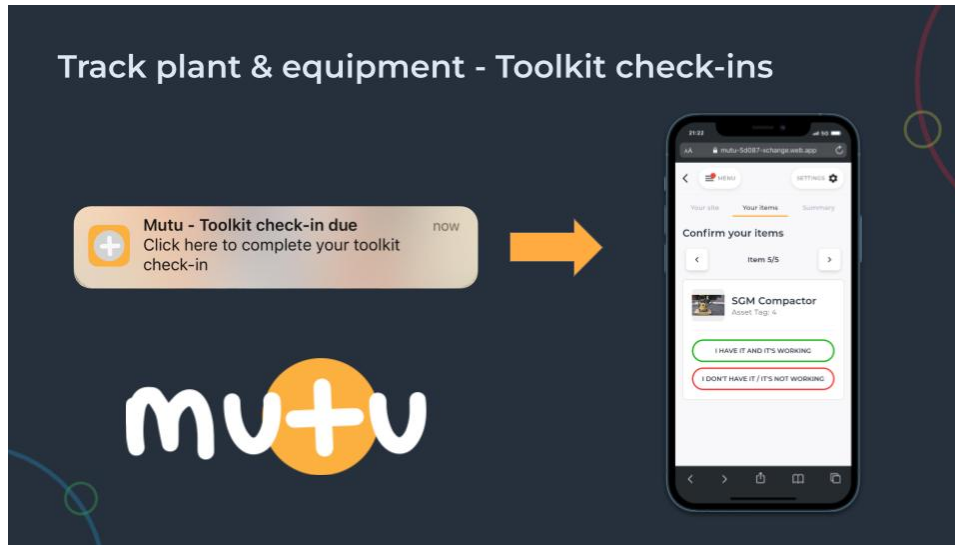

- Developed a focus beyond simply talking about the activity and general hazards to using the **energy wheel tool** to support better hazard ID and focussed controls – targeted at **Stuff that Can Kill You (STCKY)**.
- **Site map has become a key interactive tool** in the prestart meeting, using the energy wheel to have a STCKY conversation, to talk and hear about controls (STCKY controls) and picture it visually. This gives us an even greater chance of successfully keeping key controls in place on site.
- **Client's Health and Safety auditor** was on site for one of the prestarts.
 - He **gave the team a shout-out** following this prestart and mentioned that it resulted in everyone walking away with clarity on what they needed to do to be safe, and what controls they were relying on.

More efficient and engaging prestarts help in making the work and site safer.

“Tool Box Check In”

Our users love it, it provides clear reporting, accountability and saves them money, which equates to more margin on every job!

- Contractors were struggling with losing small plant and equipment.
- The costs of this was small, but accumulated to significant figures across jobs.
- Mutu has subsequently developed the "Tool Box Check In". A digital space for Contractors to record the small plant and equipment, and help them to embed practices to do a regular tool box check in.
- Our users love it, it provides clear reporting, accountability and saves them money, which equates to more margin on every job!

Thank you to CablePrice for donating our
Good Stuff winner's trophy
