WHAT IS SUSTAINABILITY?

Sustainability means meeting our own needs without compromising the ability of future generations to meet their own needs. It is about being good ancestors.

As a business, it is our means of delivering goods and services sustainably as we responsibly utilise natural, social and economic resources.

Sustainability is one of the core drivers in our policy development and decision-making processes. It is an area that will also continue to become more prevalent.

There is a crucial need to balance being a sustainable profitable business, while connecting with our planet, connecting with our people, connecting with our partners and community.

WHY DO YOU NEED A SUSTAINABILITY STRATEGY?

It sets out to understand and address topics facing businesses such as:

- Climate change and pollution
- Social inequity and human rights issues
- Depletion of natural resources and consumption
- Fair working conditions
- Reduce, recycle, reuse opportunities
- Energy sources and usage
- Declining biodiversity

By addressing some of the topics above, a strategy can help you:

- Prioritise the issues where your company should focus
- Bring together current sustainability initiatives into an overarching strategy
- Co-create an actionable strategy with your teams, building engagement across your organisation.
- Create an organisation with which your employees, partners and contacts are proud to be associated.
- Transform your business to meet the needs of the present without compromising the ability of future generations to meet their own needs.

WHAT OUTCOMES DO YOU GET?

- An overview of Sustainability and key concepts: United Nations Sustainable Development Goals (SDGs), Circular Economy, Systems Approach.
- Understanding the impacts of your initiatives on people and the environment, and where current efforts fit
- Identify actions across the organisation to contribute to sustainability efforts.
- Conduct an initial materiality assessment to prioritise the topics and actions that matter most to your organisation and your stakeholders, to be circulated for stakeholder input.
- Develop and align on a Sustainability Strategy ready for implementation.
- Create an action plan with mid-term, annual objectives and 90-day sustainability priorities.
